UNESCO Chair on Sustainable Development and Environmental Education

Nature and human well-being linkages are crucial for our society. Our activities are focused on reinforcing linkages through research, education, participation and collaboration.

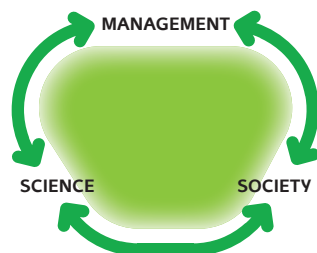

RESEARCH: Ecosystem Services Assessment

- Research on Ecosystem Services (ES), from the supply to the demand-sides, developing a methodological approach that takes into account natural, social and economical dimensions. Diverse lines are carried out: mapping ecosystems services, analyzing social perceptions, scenarios of future...).
- Useful to integrate the environmental factor in the diagnostic of urban system and to find solutions for improving social-ecological resilience.
- Collaborative mechanisms between science, society and management.

Nature, basis of well-being

Ecosystem Services of the **Basque Country**

EDUCATION: Master Degree on Environment, Sustainability and SDGS

This master aims to train people on sustainability, not only on knowledge, but also on motivations, attitudes and values.

We apply an transdisciplinary and critical perspective of knowledge, with the intention of solving real problems.

PARTNERSHIPS: Collaboration with Policy Makers and Society

- An integrative approach that enhances the link between science, policy-making and society. This working approach gives insight on effective governance instruments.
- All these transdisciplinary processes facilitate the creation of synergies and winwin solutions.
