

Doctoral training prepares doctoral candidates for their future careers in a constantly changing society. At this year's ORPHEUS conference, keynote speakers and presenters selected from submitted abstracts, will address how we can put the **I**'s and **O**'s in doctoral training. Check out the program at <https://www.orpheus-med.org/conferences/>.

Open science creates an opportunity for high-quality research, because it makes the entire research process more transparent and freely available to other scholars and society. The European Universities initiative and Doctoral Networks encourage **I**nternationalization, making it more accessible for researchers all over the world, while the need for **I**nterdisciplinary research and **I**ntersectoral mobility continues to grow.

At our annual meeting, this year in Leuven, we will discuss the opportunities and challenges associated with these contemporary elements of doctoral training and research activities. We warmly invite you to actively participate in the workshops, panel discussions, presentations and poster sessions, meeting new colleagues as you do, and expanding your network.

Registration is now open (<https://www.kuleuven.be/register/nl/orpheus-2023/step1>), with discounts for Early birds and ORPHEUS members (<https://www.orpheus-med.org/>).
