

POSTDOCTORAL POSITION IN MADRID

We offer two postdoc positions to join the **Immunobiology lab at CNIC**, led by Dr. David Sancho and funded by an **ERC consolidator grant**. We want to explore the molecular mechanisms that connect innate sensing with subsequent changes in mitochondrial metabolism in dendritic cells and the potential manipulation of dendritic cell metabolism to improve immunotherapy. For more information on general projects in the Immunobiology lab, visit <http://www.cnic.es/en/inflamacion/immunobiologia/index.php>

REQUIREMENTS

We are looking for highly motivated postdoctoral scientists holding a PhD in a relevant discipline related to immunology. Candidates must have:

- An outstanding publication record as first authors in experimental research in peer reviewed journals.
- The ideal candidate for one of the positions should have experience in biochemistry, proteomics, bioinformatics analysis of proteomics results, together with a strong background in the study of innate immune receptors and signaling.
- For the other position, experience in immunometabolism, and particularly mitochondrial metabolism, will be valued.

APPLICATION

- Applications must include a cover letter, a CV and contacts for 3 references
- Please apply by email to: dsancho@cnic.es. Please, clearly state in the subject of your email "Postdoc Position" and a link to your most outstanding publication.
