

# WiFi EHU-wGuest guest portal

---

## Purpose

The UPV/EHU is part of the [Eduroam](#) program that provides connectivity and mobility between members of the partner institutions. Eduroam has security and authentication mechanisms and can be used by the PDI, PAS, students and other groups ([BESTEAK](#)) of the UPV/EHU.

To provide connectivity for individual guests or those present at group events who cannot use Eduroam, a WiFi network has been created that can be accessed through a captive portal called **EHU-wGuest**.

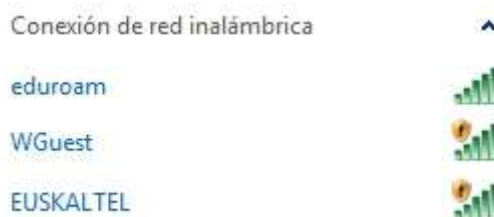

## EHU-wGuest access requirements

To access EHU-wGuest, the user must have:

- Terminal (computer, PDA, Smartphone, tablet, etc.) that meets [Wi-Fi 802.11abgn](#) standards.<sup>1</sup>
- Authorisation from a PAS or PDI of the UPV/EHU, which will provide the user name and password required to connect to EHU-wGuest (access account).
- A valid account, i.e. an account that has not expired or been deactivated.
- The user must be in a WiFi zone of the UPV/EHU.

## How to use EHU-wGuest

To access the EHU-wGuest network, the user must establish a connection with the SSID EHU-wGuest. The security of this SSID is very basic<sup>2</sup>, as indicated before the connection is established.

Once the connection has been established, open any page on a web browser. The request will be redirected to the EHU-wGuest portal that will look like the page below:

user:

password:

Ongi etorri UPV/EHU-ko WGuest Zerbitzura | Bienvenido al Servicio WGuest de la UPV/EHU | Welcome to UPV/EHU WGuest Service

To access other pages, enter the user name and password provided.

## Limitations of the service

- Accounts created for individual visitors to EHU-wGuest are for personal use and, therefore, non-transferrable.
- EHU-wGuest accounts are valid for between 1 and 30 days.<sup>3</sup>
- Use of the EHU-wGuest network is monitored.
- Internet access is limited to the ports necessary to establish VPNs, web navigation and FTP.

---

<sup>1</sup> 802.11a and n are only available in certain coverage areas.

<sup>2</sup> It is the responsibility of the user to adopt the security measures necessary to protect their terminals from threats usually encountered in a public network, and to avoid threats to other terminals in the network.

<sup>3</sup> Accounts valid for longer periods can be created where justified under exceptional circumstances.
